Mp4 is a widely used video format; You can grab MP4 files off YouTube, Vimeo, and many other online video websites. But what if you have a video of a song you love and want to extract only the music? Read on to see two different ways you can do that only. The Power-User Way: Using Foobar2000 Foobar2000 is a lean, free and incredibly versatile audio player. Setting up audio conversion requires a little work, but it's a one-time operation. Once set up, you can use it to convert batches of files very quickly and fine-tune conversion settings to get the exact results you're looking for. If you do not have Foobar2000, here's how to set it up: First, go to the Foobar2000 website, download the app and install it. Do not forget to check the Converter option is checked. Next you will need lame, which is a free MP3 encoder. You can buy rarewares. If you're not sure what you want to get, download the first file on the page (Currently LAME 3.98.4). This is a small ZIP file; if you download it, extract content somewhere safe (not in a temporary location). I put it under Program Files &gt; LAME. Next run Foobar2000 and drop a test MP4 into the playlist. When Play comes in, you should be able to hear only the music. Now right-click the file and choose Convert &gt;... The Foobar2000 converter setup dialog box opens; If you are already satisfied with this tool, you can use it to determine any number of conversion sets. Let's get the first one up. Click Output Format. From the list, select MP3 (LAME). By default, encoding is performed at 190 kbps. This may be enough for most people, but if you are looking for something more specific, you can press Edit and manually set the bitrate Quality. Click Back to go back to the Set Converter dialog box. Here you can configure all kinds of extra settings, such as the destination folder, voice processing, and what to do when the conversion is complete. For now, we'll leave them all by default. Click Convert. Foobar2000 now pops up an error error if you let this operation know, it may lead to a loss of quality. It's a part of life, click yes - we're sure that's what we want. You will now be asked where you want to save the resulting MP3; select a file name, and then click Save. By the way, this is not the original Michael Jackson song, but the cover version of Pomplamoose. Since this is the first file we're converting, Foobar2000 now asks where lame .exe is. Go where you unplugged the LAME archive and double-click lame.exe. Now a progress bar must be running when the conversion occurs. That's it, that's it! You just converted your first MP4 to MP3 using Foobar2000. The next one will be much easier, as everything is now ready. All you have to do with the following file (or batch of files) is right-click, click Convert, and then click [Last Used]. You can also create as many conversion sets as you want, all of which appear in this menu. The simple way: Use the website if the above seems too much wrong, you can always use the website to do the job. There are many sites that provide direct YouTube-TO-MP3 conversion services, but one of the easiest is YouTube mp3. It lacks fine tuning options and works with just one file at a time, but it makes it very simple to use. Just paste the video URL, click Convert Video, and download the resulting MP3. Andrew Schrader Video TS files, as well as audio TS files, are the two main folders for DVD content. They contain several file types, including VOB, which are the main content of MPEG-2 encoded DVDs. Since MP4s (MPEG-4s) are another MPEG standard, it's not hard to open video TS folders and re-encode them into MP4s with a free program called Handbrake. HandBrake specializes in ripping and converting DVD content, either by importing the entire DVD content into the program or selecting certain sections of the DVD. Although it is not common for users to rip DVD videos without the audio, users do have the option of ripping only videos. Download and install the Handbrake. Accept the terms of use. Open the handbrake. Insert the DVD into your computer. The handbrake must recognise it automatically. If not, click the Source icon at the top of the toolbar and look for it in the search window. If the video TS files are already on your computer, click on The Source and locate the video's TS folder contents in the pop-up menu. Open the handbrake. Select which chapters you want to convert. Click Browse under the Destination header to select the destination of the output file after converting. Click Switch Presets or Presets to the right of the form. Select a preset setting. For Mp4 video, choose from the iPod settings, as these are encoded. This can take several minutes to several hours, depending on the size of the files. Size. Size.
